PADMA OJHA

Senior Flutter Developer | Cross-Platform Mobile Applications (iOS & Android)

Ahmedabad, Gujarat, India | +91 7600315501 | padmaojha1110@gmail.com | linkedin.com/in/padma-ojha

PROFESSIONAL SUMMARY

Mobile Application Developer with 7 years of mobile development experience, including 5 years building and shipping multi-platform iOS and Android applications using the Flutter SDK and Dart. Led architecture and delivery of a production fintech-adjacent app for the global coffee trade—real-time market data over WebSockets, a custom server-driven UI engine, Supabase real-time chat, multi-gateway payments, and OTA release engineering with Shorebird. Skilled across the full app lifecycle—analysis, design, implementation, and testing—with hands-on expertise in Flutter widgets, Material Design, custom components, animations, and gesture-driven interaction. Strong command of Dart fundamentals including multithreading, isolates, and reactive/asynchronous data flow. Experienced integrating REST/HTTP APIs with Dio, Firebase, Supabase, WebSockets, and native device capabilities. Comfortable across Gradle and Xcode build configurations, applying MVVM, clean architecture, and repository-pattern practices to deliver high-quality, production-ready apps.

EXPERIENCE

Senior Software Engineer – Flutter | *CoffeeWeb Technologies Pvt. Ltd., Bangalore, India, Aug* **2023 – May 2026**

- Architected and shipped a production Flutter app (iOS + Android) for the global coffee trade — live market quotes, industry news, community chat, subscriptions, weather, reports, and an in-app AI assistant — using GetX MVVM, repository/service layers, Bindings/DI, and flavor-based (dev/preprod/prod) environments.
- Built a custom server-driven UI layer (STAC) that renders validated JSON schemas into Flutter widgets via a widget registry, enabling remote UI and layout updates without a full store release.
- Delivered real-time market terminals (ICE/exchange-style contracts, workbooks, forex, live charts) over WebSockets with lifecycle-aware socket reconnect and built real-time community and personal chat—moderation, swipe-to-reply, media upload with progress—on Supabase Realtime; offloaded heavy JSON parsing to Dart isolates via compute().
- Integrated Stripe, Razorpay, PayPal (WebView), and Apple/Google in-app purchases for subscription monetization, plus Google Sign-In and Sign in with Apple on Firebase Auth with secure token storage (flutter_secure_storage).
- Built the CW Social industry news feed (rich text, video auto-play, link previews, cached images) and CoffeeWeb AI, an in-app AI chat assistant with prompt history and reconnect-aware refresh.
- Shipped data-heavy modules—country reports, global prices, freight and FOB port differentials, exchange holiday and harvest calendars, and geolocation-based weather—with PDF viewing/printing (Syncfusion, pdf/printing) and ObjectBox local caching for offline performance.
- Instrumented production quality and growth with Sentry, Firebase Crashlytics, Mixpanel, and Firebase Analytics/Remote Config; added FCM push, local notifications, and deep linking (app_links) into specific in-app screens.
- Used **AI-assisted development tools (Claude, Cursor, GitHub Copilot)** throughout the development cycle to accelerate implementation, generate solutions, troubleshoot issues, and speed up code review.
- Cut cold-start time ~40% through widget-rebuild profiling and optimization; drove crash-free sessions.
- Owned end-to-end release engineering: Android/iOS product flavors, OTA patches with Shorebird, and automated weekly releases via Fastlane + GitHub Actions across dev, preprod, and production environments.
- Participated in sprint planning, led code reviews, and collaborated with backend, QA, design, and product; mentored 3 junior Flutter developers.

Software Engineer – Mobile Development | *IT Plus I Software Pvt. Ltd., Bangalore, India, Mar* **2022 – Aug 2023**

- Developed native Android and Flutter applications for multiple business clients, applying Material Design and Human Interface Guidelines for platform-consistent UI on iOS and Android.
- Migrated existing Android modules to Flutter, eliminating duplicated platform-specific development effort and unifying the codebase across platforms.
- Built reusable UI components and integrated RESTful APIs with JSON parsing using Git for version control, shortening delivery time on subsequent features.
- Partnered with QA throughout the testing process to identify and resolve production issues pre-release, improving overall release quality.

Mobile Application Developer | *Calcite Software Solutions LLP, Bangalore, India | Nov* **2020 – Feb 2022**

- Developed Android and Flutter applications across finance, retail, and enterprise client domains, applying industry-standard development practices throughout.
- Designed reusable UI components and networking modules (HTTP, REST) that accelerated feature development for the team.
- Integrated backend REST APIs and supported production application maintenance and testing.
- Performed device compatibility testing and supported production deployments across both platforms.

Early Career | **Mar 2015 – Nov 2020**

- Freelance Mobile Developer (Nov 2019 – Nov 2020) — Delivered Android and Flutter application projects for independent clients, managing development end-to-end from requirements to release.

- Freelance Android Developer & Part-time Java Developer, Arun Data Processing (Dec 2018 – Oct 2019) — Delivered small Android projects while working part-time as a Java developer.
- Java & Android Developer, Arun Data Processing (Sep 2017 – May 2018) — Developed Java-based backend modules and Android applications for enterprise data-processing clients.
- Embedded Software Engineer, K Track Devices (Mar 2015 – Aug 2015) — Developed embedded firmware and software for GPS tracking devices in C/C++, including Bluetooth and SMS-based communication modules.

PROJECTS

- CoffeeWeb (Flutter, Dart, GetX, ObjectBox, Dio, WebSockets, Supabase Realtime, Firebase, Stripe/Razorpay/PayPal/IAP, STAC server-driven UI, Shorebird, GitHub Actions, Fastlane) — Cross-platform iOS/Android platform for the global coffee trade: live market prices and terminals, industry news feed, community and personal chat, weather, country/price/freight reports, exchange calendars, in-app AI assistant, and subscription-based premium services.
- Agora City Centre (Flutter, Firebase) — Mobile app for property information, lifestyle amenities, events, retail, and customer engagement.
- Munim App (Android, Java) — Employee management app for attendance, payroll, leave requests, and reporting.

TECHNICAL SKILLS

UI: Material Design, custom widgets & components, animations, gesture-based user interaction

Core: Dart, Flutter SDK, Dart isolates / compute()

Architecture: GetX (Rx, Bindings, Obx, routing, DI), MVVM, Clean Architecture, Repository Pattern, SOLID Principles

Server-Driven UI: Custom STAC engine — JSON schema, widget registry, validators, client-side caching

Communication & Realtime: HTTP, REST, Dio, WebSockets (web_socket_channel), Supabase Realtime, connectivity_plus

Backend & Cloud: Firebase (Auth, FCM, Crashlytics, Analytics, Remote Config, Firestore, Storage), Supabase Flutter

Payments & Identity: Stripe, Razorpay, PayPal, In-App Purchase, Google Sign-In, Sign in with Apple

Persisting Data: ObjectBox, GetStorage, flutter_secure_storage, SharedPreferences, Files

Release Engineering: Android/iOS flavors, envied, Shorebird OTA code push, GitHub Actions, Fastlane, Gradle/Xcode, CocoaPods

Codegen: json_serializable, build_runner, ObjectBox generator, envied_generator

Media & Rich UI: camera/image_picker, video_player/better_player, Syncfusion Charts + PDF, fl_chart, pdf/printing, geolocator, share_plus/url_launcher, app_links deep linking

Observability & Growth: Sentry, Firebase Crashlytics, Mixpanel, Firebase Analytics

Testing: Unit Testing, Widget Testing, Maestro E2E smoke tests, CI flutter analyze/dart format, cross-device testing

Other (prior roles, not CoffeeWeb): Provider, BLoC/Cubit, Riverpod, Hive, SQLite,

Version Control & Process: Git, sprint planning, code reviews

Tools: Android Studio, VS Code, Xcode, Postman, Bruno, Figma

EDUCATION

Bachelor of Computer Applications (BCA) — Jai Narain Vyas University (JNVU), Jodhpur
